1. PROJECT NAME

TxTrack

Onchain Analytics Registry

2. PROJECT BLURB

TxTrack is a public onchain analytics registry that lets anyone query real-time activity data for any registered smart contract on Botchain. Projects register their contract address once, then push user interactions and transactions onchain via logUser() and logTx(). Anyone — a DAO, a partner, a community member — can call the free view functions to retrieve total users, unique wallets, transaction count, and a full paginated activity feed. No backend. No dashboard API key. Pure onchain transparency, accessible to every participant on Botchain.

3. PROJECT WEBSITE

https://txtrack.xyz

4. CO-MARKETING OPPORTUNITIES

1 **Botchain Analytics Layer**
Position TxTrack as the shared analytics primitive for all projects building on Botchain, creating a public leaderboard of the most active onchain protocols on the network.

2 **Ecosystem Data Partner**
Work with the Botchain core team to embed TxTrack as the official onchain analytics tool for the ecosystem, driving mutual developer adoption and network growth.

3 **Hackathon Integration**
Botchain hackathon projects that log activity via TxTrack get featured in the public registry, giving participants free visibility during and after every event.

4 **DAO Governance Signal**
Unique wallet counts from TxTrack serve as sybil-resistant participation proof for Botchain-native DAOs, enabling objective onchain-verified voting weight.

5 **Developer Tooling Bundle**

Package TxTrack alongside Botchain SDKs, RPC tools, and node infrastructure as the go-to analytics layer recommended to every new project launching on the network.
